

Tech.App Launcher – Download Plugin to local file system

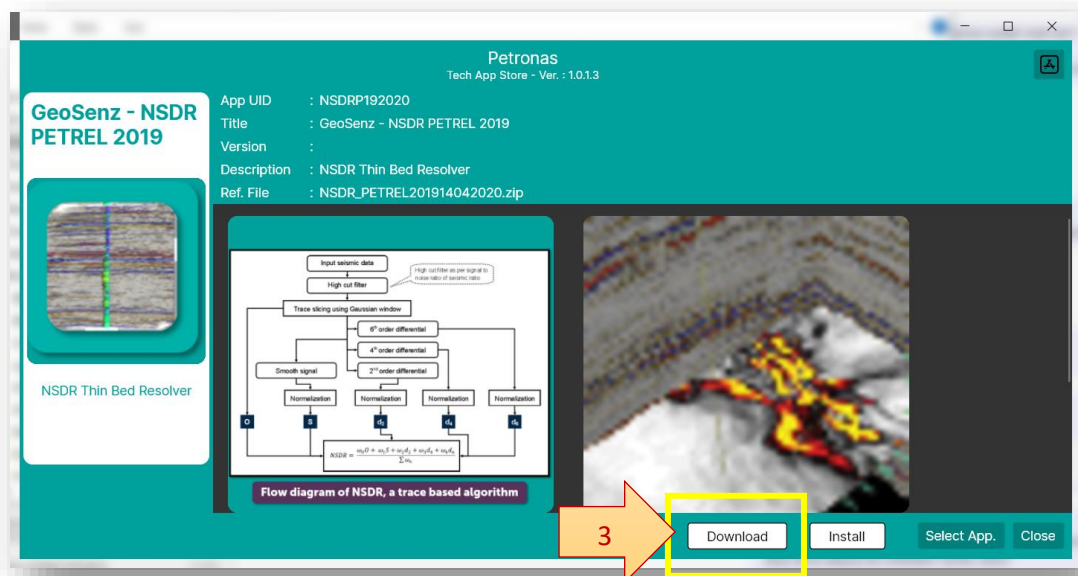

1. User are required to update the launcher in order to have version 1.0.1.3 running. Click on the '**Select App**' button^[1] as shown in the screenshot below.

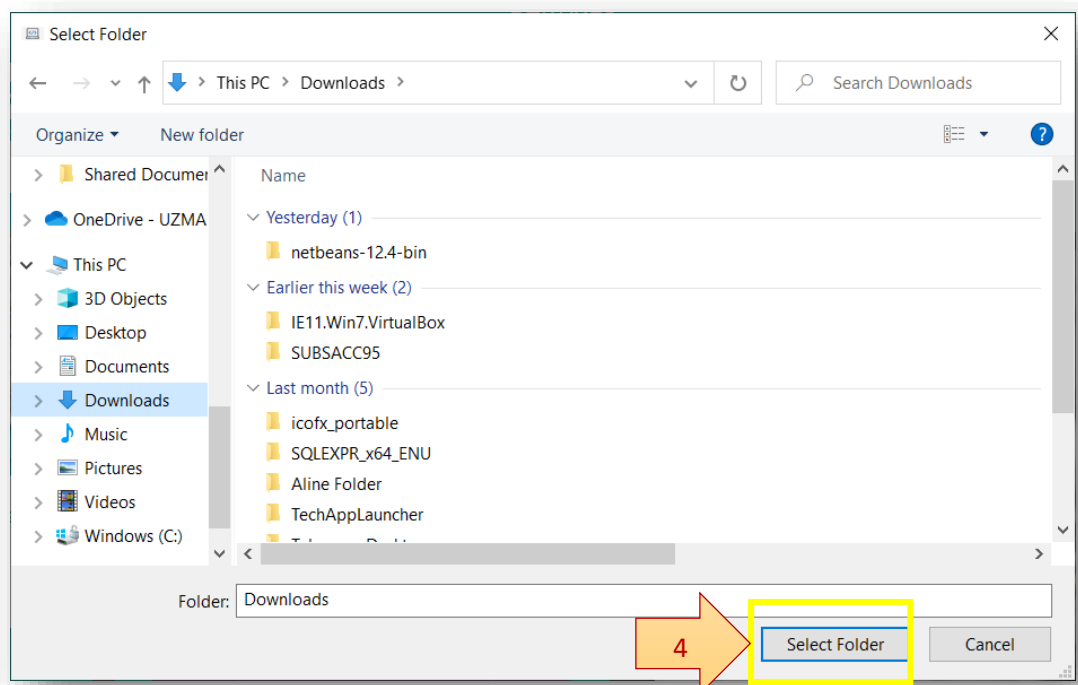

2. Select the plugin from the list^[2]. **Double-Tapped** on the item, the launcher will select the item and then close the window automatically.

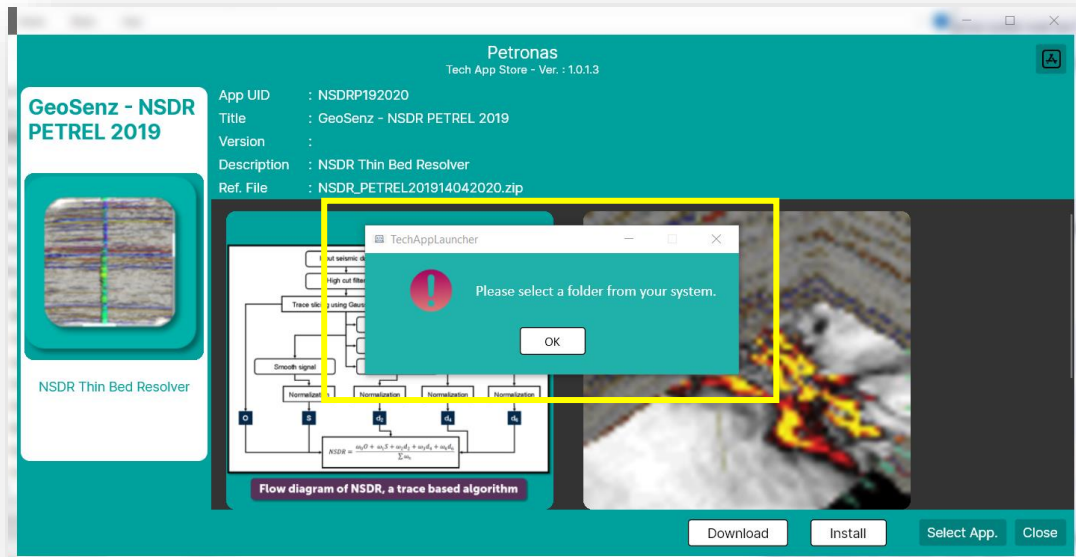

3. The launcher display the detail on the selected plugin/application. On version 1.0.1.3 or above, user is given option to download the plugin/application instead of install to the system. To download, click on the '**Download**' button^[3].

4. The launcher will prompt the user to locate where to save the plugin file. Hence, select a folder and then click on the '**Select Folder**' button^[4].

5. If user never select any folder, the launcher will prompt a warning message as below.

6. If the download folder is specified properly, then the launcher will notify whether the download is being successful or fail.
