

## Tech.App Launcher – Plugin Installation from local file

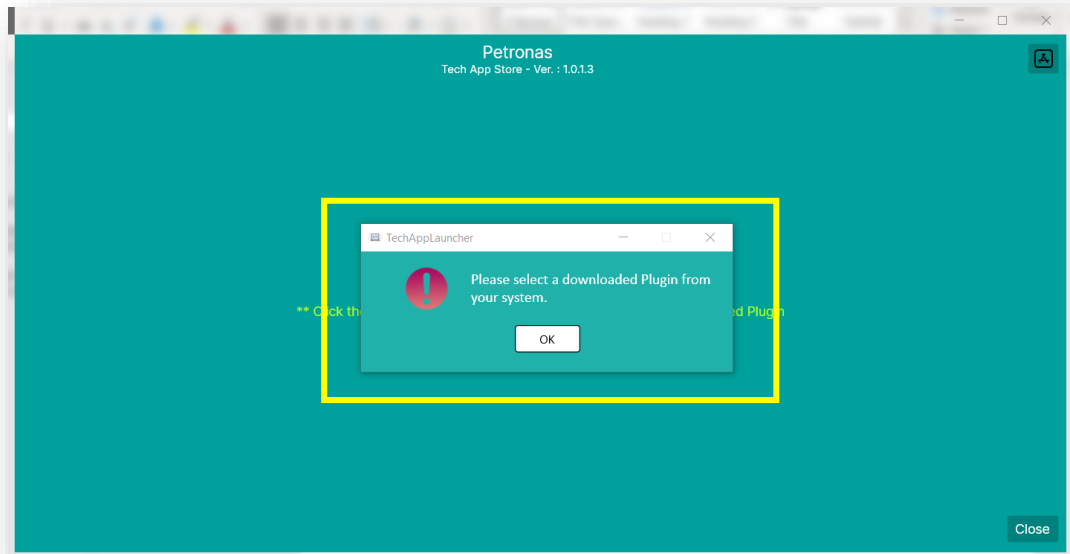

1. User are required to update the launcher in order to have version 1.0.1.3 running. Click on the button<sup>[1]</sup> as shown in the screenshot below.

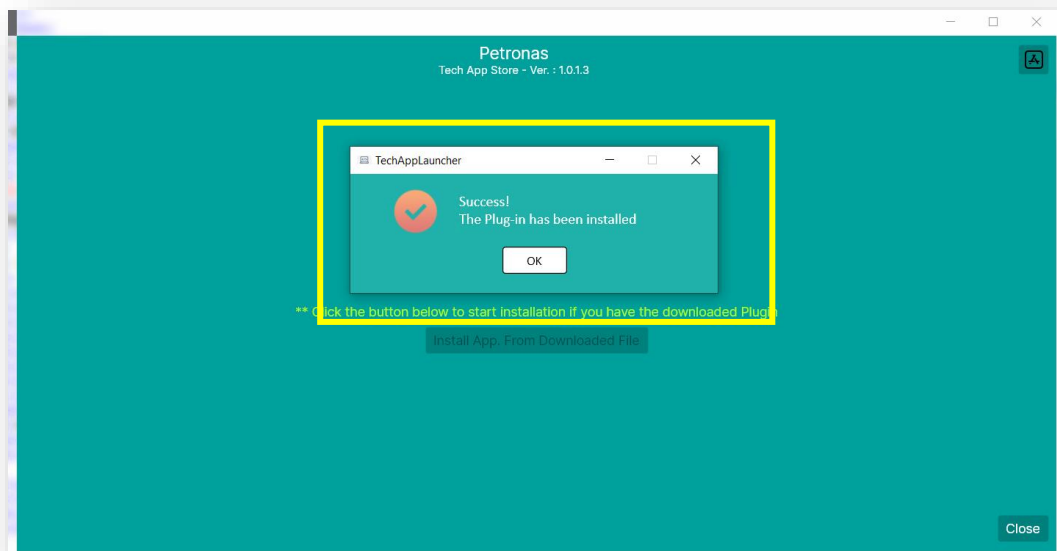

2. The launcher will prompt the user to locate the downloaded plugin file. Upon selected the file, click 'Open' button<sup>[2]</sup> to allow the launcher open the file.

3. If user never select a file, the launcher will prompt a warning message as below.

4. If the plugin file is properly selected, then the launcher will notify whether the installation is being successful or fail.

5. Once the installation is successful, the user shall restart the 'Petrel' application in order to let the application to load the plugin had just installed to the system.
