

Tech.App Launcher – 1.0.1.3 Update

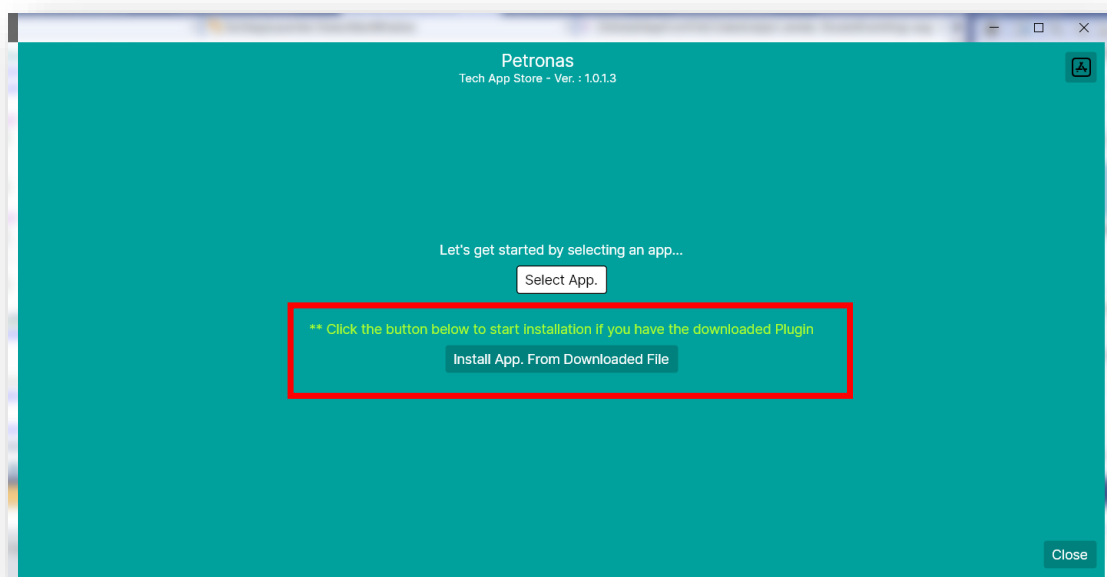

1. Tooltip

A tooltip message will be appeared when user hover the mouse to interactive interface such as button or input text box.

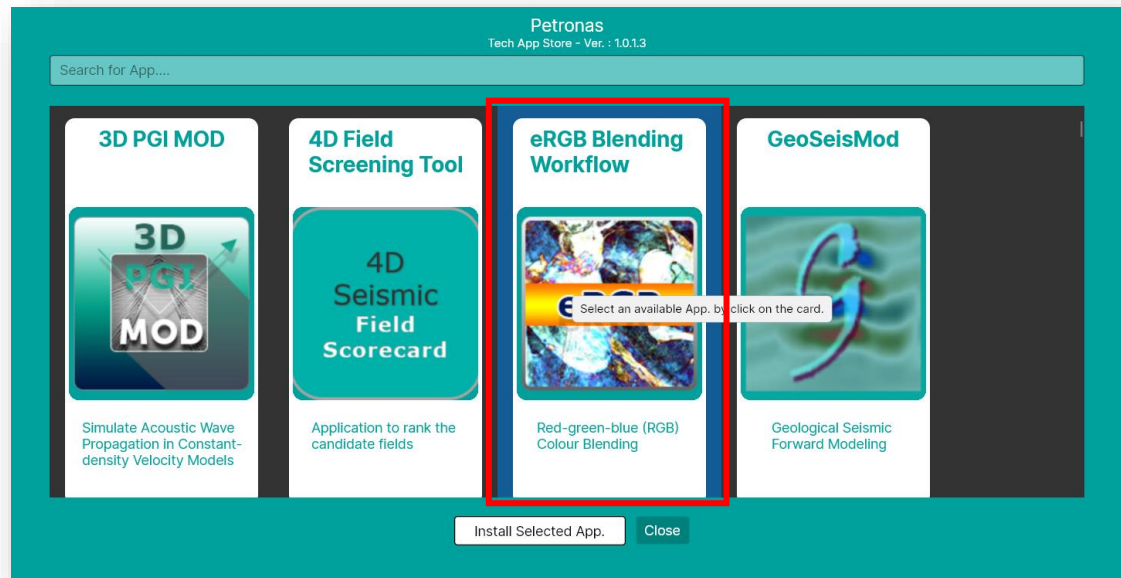

2. Install Plugin/Application from downloaded file

This feature allows user whose does not have an internet connection to install a plugin. The user is needed to have the plugin prior to use the launcher to install locally.

3. User interface experience enhancement

Double-Tapped functionality is activated in order to select an item from the list without having to click on the 'Install Selected App' button on the bottom of the screen. Which means, user just double-tapped on the item then the item is selected and the screen close automatically.

4. Download Plugin

Instead of installation, the launcher provide another option to download the selected plugin.
